### Origin and Breeding History of the Variety

- 14 a. 1. Holladay (N85-578) was developed by the USDA-ARS cooperating with NCARS. The line is an F<sub>6</sub> selection from the cross of N77-179 x 'Johnston'. N77-179 is a breeding line selection from the cross N70-1549 x N72-3213. Parents of N72-3213 were D67-B5 (a sib of the cultivar, Pickett) and N64-2451 (a sib of the cultivar, Ransom). Parents of N70-1549 were the cultivar, Dare, and D65-6765. The parents D65-6765 were D58-3358, a Jackson backcross derivative (Jackson(4) x D49-2491), and D59-9289. Parents of D57-9289 were D51-4877, (a sib of the cultivar, Hood), and D55-488, (a sib of the cultivar, Braxton).
  - 2. The initial and subsequent selection was conducted in North Carolina. The final selection was made in 1985. Yield evaluations were made the following year in local preliminary trials in North Carolina. The line was entered in the regional preliminary trials (8 locations) in 1987 and in regional uniform tests in 1988-1990. Breeders seed was provided to the N.C. Foundation seed program in 1990.

Foundation seed program in 1990.

(Interva = seed yield, resistance to lodging, and seed quality MAS 104/90 (1872)

3. Purple flowered or tawny pubescent plants were occasionally found at a very low frequency due to seed mixture. These were rogued prior to harvest. Under certain environmental conditions (as yet unidentified), as many as 0.2% of the plants can be significantly taller than average.

- 4. Nine years of testing and increase have demonstrated no instability.
- 14 b. Holladay (N85-578) most closely resembles 'Dare'. It differs from Dare by having purple flowers, imperfect black hila, shorter height (15% shorter than Dare), and larger seeds (9% larger than Dare).
- 14 c. See attached form.
- 14 d. Holladay is a short variety. It averaged 27 inches in height in 1988-1990 USDA Uniform Tests. However, under certain environmental conditions (as yet undefined), as many as 0.2% of the plants can be significantly taller than average.

PV# 9500137

SOYBEAN 'Holladay'

#### NOVELTY STATEMENT

'Holladay' is most similar to 'Dare'; however, 'Holladay' has purple flowers and seeds with black hila whereas 'Dare' has white flowers and seeds with buff hila.

### SOYBEAN

### **HOLLADAY**

### Exhibit E. Statement of the Basis of Applicant's Ownership

Holladay was developed by Dr. Joe W. Burton, Research Geneticist with the U.S. Department of Agriculture, Agricultural Research Service (USDA-ARS) and Professor of Crop Science with the N.C. Agricultural Research Service (NCARS), College of Agriculture and Life Sciences, NC State University. Holladay is owned exclusively by the USDA-ARS and the NCARS who retain all rights to its use.
